

**Plan trips for practice
periods of competency
9 (delivery trip)**

Lesson Objective

- plan trips to be carried out in urban, rural, and/or hilly environments

Targeted competency elements

1. Gather information about the trip to be made
2. Research information on maps
3. Perform calculations necessary for trip planning
4. Determine the itinerary

Lesson Content

1. Locate places and addresses using traditional maps combined with electronic tools when necessary
2. Determine elements to anticipate (foreseeable potential problems) e.g.: rush hour, restricted routes, weather conditions, construction, TDG (Transportation of Dangerous Goods), etc.
3. Determine optimal routes to take during practice periods

1. Estimate the time needed to travel the routes to each recipient
2. Determine meal stop locations during travel periods
3. Determine the amount of fuel needed to complete the trips

Gather information about the trip to be made

*The instructor will determine the procedure when providing you with one or more bills of lading for a driving practice, while following the itinerary you will have constructed to reach your destination.

Identify important information on a bill of lading

Research information on maps

- Use traditional maps or electronic maps to begin gathering information to plan your itinerary

Determine the itinerary

- Take note of your itinerary after gathering and verifying the necessary information to plan the optimal route.

Perform calculations necessary for trip planning

- calculate the distance of the delivery to be made
- calculate the approximate driving time for the delivery
- calculate the approximate fuel consumption for the delivery

Determine stopping places during periods

- Establish one or more locations to have your meal near a completed delivery or an ongoing delivery

Determine the amount of fuel needed to complete the trips

- Calculate the approximate fuel consumption to make a delivery

Good Job !
